I like the Photo Grid feature, which is available to download in the annual edition. I often use it when I edit my images with myself. I find it makes my work flow smoother and helps me to track things faster. To be honest, I am not a big fan of some of the AI tools that Photoshop uses. While I do not want to deny that there is some use for them, I feel they can go a bit further. Photoshop has always been a bit too pretentious with many of the filters it offered, which I believe has led many to turn to other products and editing programs. I do not have a problem with them, but I feel Photoshop could offer more and improve more. However, the main reason I don't like Photoshop is because it is too reliant on Adobe Motion. Motion was inspired by Adobe Premiere and Photoshop, but it looks nothing like it. The colour of it is so different and looks so monotonous. I am sure that every company would love to have a program that looks like it was inspired by Adobe Premiere. Repeating patterns in textures or overlaying multiple layers is more manageable with the recent update, thus making patterns and textures easier to manage. Elements has many prebuilt tools for painting with patterns, since this is an area of heavy usage in this version. With the new tools, an image becomes more gradually built up and it is much more user-friendly.

The new Edit > Paste Special > Paste in Place works much better than the pasting in the canvas with the previous method. The method was very convenient, but sometimes it brings in tricky pixels. Also, this method is faster than the pasting in the canvas.
