What's New in the?

----- This screensaver provides a cool and relaxing atmosphere. You can enjoy the constantly changing color of the numbers in the digital clock. When your monitor

goes idle, it will display a nice digital clock. This screensaver is a simple screen saver with a digital clock on black background that rotates around the clock every 5 seconds. The digital clock shown on the screen is black on white background (font color is black) and has four numbers for the hour, minute and seconds and a moving analog clock in the center. The clock is blue (light color), has transparent hour and minute hands (in the digital part of the clock) and its second hand is blue and transparent. There are different variations on the background of this screensaver (color, transparency) and the screen saver can be started as a screensaver or a clock. The screensaver supports Arabic numeral format (12 + 10) in the digital part of the clock (if the language is enabled in preferences). The screensaver is a standalone screensaver with no external dependencies. There is an option to have the number of particles that are shown in the digital clock change in a more animated way (every few seconds or even every second). The time interval can be changed in the preferences. > The digital clock on the screen is a little different from the one used by the screensaver. The color of the digit hour is the one used by the screensaver. The analog clock is rendered in all colors (incl. green, blue, red and yellow) in a transition from white to green. >> The screensaver can be started as a screensaver (option `show clock in clocks` in preferences) and also as a clock (option `show clock in clock` in preferences). >> The colors of the hour, minutes and seconds are the same as in the `WallClock` v03 (see link below). >> The clock hands are rendered in the same color as the digits they are rotating around. >> There are some parameters that influence the behavior of the digital clock (see preferences): >> - `time interval` - the time interval at which the digital clock is rotated around >> - `number of particles` - the number of particles that are shown in the digital clock when it rotates >> - `time offset` - the distance from the current time to the screen saver's start time (this parameter only exists in the clock variant of the screen saver). >> - `fragments per minute` - the number of seconds per minute of the display of the analog clock >> - `gap between clock hands` - the
