To take a simple screen capture, click the red button near the upper-right corner of Photoshop's window, select **Window → Capture Screen Shot...**, and from there drag the red "Save Screenshot" icon to save the image to your computer. This screenshot will open automatically in Photoshop with the filename automatically placed in the "File Name" box. It's important to note that the huge list of images in the Photoshop.app package are included in this review. They're a real asset. It's surely a bit better to own them all rather than paying for them. The observations in the Background section below this review have already suggested that Photoshop adds features to its mobile versions. Touch-enhanced Quick Fix support is one example — it is now possible to correct and crop a photo from your phone's touchscreen. Color-correction filters provide further new options. There's a bright new Live Sharpen tool that gives a bit of a boost to images that don't look as sharp as they should. As with the rest of Lightroom, you can use the tool in the Toolbox, and it will be applied as a Live filter. The same filters can be applied to images shot with the iPhone's iPhone 6/6s-style lens, and there are some new options to deal with that. As with most mobile apps, you can share images from Photoshop using the AirDrop and Message apps. There are also several photo-editing enhancement options in an updated Touchup toolbox, including the option to extend exposure to create dramatic portraits; add luminosity; add visual effects; distort an image; or change the white balance to a specific temperature. You can also throw a few tools into the painting box for added special effects. There's also an option in the Colors toolbox to add a matte effect to make your subject more visible in photos where the background is black or dark.

Photoshop Camera makes it easy to transform your photos with AI-driven effects. This is not an app that will change the way your photo is received, so make sure that you keep the features of your photo editing app after it's been customized using this app. Photoshop Camera uses AI to learn

about your preferences so it can perform automatic effects. The goal of the app is to give you the tools you need to make professional looking effects without having to redo your photos. The app accomplishes this by analyzing the information in your chosen photo editing app and applies filters that have been used frequently. The app is designed to be general purpose, so you will still have full control over your post-processing images once the app finishes. By using the app to edit your photos, you do not lose control over your image editing process. Once you are done with the effects the app creates, the selected filters can be removed without detrimental effects on the original photo you were editing. You can use Photoshop Camera to be super creative with a wide variety of categories. One of the most unique features in Photoshop Camera is the Dynamic Styles Gallery, part of Adobe Creative Cloud. We launched Photoshop Camera last week with design intent in mind. While on review, we're excited to see changes that have been requested from the community. Our first reaction is that this is going to be a powerful tool for many reasons. **What you have created with Photoshop Camera today should not be compared to what you will create tomorrow when the app becomes available.** To fully deliver on the innovations achieved by this app requires us to gather more user data and feedback. e3d0a04c9c
